PREMIO
MERCURIO D'ORO®

SBS is proud to inform its customers that a new release agent has been recently developed in cooperation with a major chemical Group.

SBS is oriented to continuous technological development; the new product allows you to decrease production costs and improve at the same time production performance. The product which is being launched on the market is:

- **Release Plus 2701** – specifically developed for SBS and produced by Arexons Italy (member of **Petronas** Lubricants)

Here are the key improvements experienced utilizing the new product:

- minor generation of foam during preparation/mixing of release agent
- **release agent mixture at 1 % dilution (99 % water) instead of 3 % (97 % water), compared to normally utilized product; that means costs saving**
- minor generation of hazardous dust during pastillation
- higher volume of pastilles

SBS is glad to propose you **Release Plus 2701** at a very competitive price.
